SILKRISE 42 – INSTALLATION

The spring will be pre-tensioned by Helioscreen.

Please ensure that brackets are installed level and parallel for correct operation.

Insert the blind into brackets when the blind is rolled up.

Make sure that the blind is not too tight between the brackets,

the smoothness and ease of rolling is affected if there is not a small amount of slack.

CHAIN SIDE

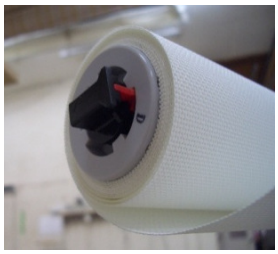
Hang chain over the gear, then insert chain side of blind into the pulley bracket

Pulley bracket can be adjusted to be top or face fixed by pressing down the tab

and moving the chain guard to the correct position.

SPRING SIDE

Insert spring end into bracket, then rotate cradle until opening faces back of bracket and clicks into place



Test blind and do final tuning
